

Practice Sheet 1: Answers

Dividing Large Numbers - total 12 marks

Section B (1 mark each)

- B1** $5,838 \div 7 = \mathbf{834}$ 1 mark
- B2** $4,536 \div 8 = \mathbf{567}$ 1 mark
- B3** $7,281 \div 9 = \mathbf{809}$ (the 0 must be there!) 1 mark
- B4** $6,342 \div 6 = \mathbf{1,057}$ (the 0 must be there!) 1 mark

Section C (1 mark for a correct method, 1 for the answer)

- C1** $6,273 \div 17 = \mathbf{369}$. Check: $369 \times 17 = 6,273$ 2 marks
- C2** $9,504 \div 24 = \mathbf{396}$. Check: $396 \times 24 = 9,504$ 2 marks
- C3** $9,792 \div 32 = \mathbf{306}$ (the 0 must be there!). Check: $306 \times 32 = 9,792$ 2 marks
- C4** $7,616 \div 34 = \mathbf{224}$. Check: $224 \times 34 = 7,616$ 2 marks

Marking tip: if the method is right but there is one small slip (e.g. a times-table fact), give the method mark. Any times-table slips are worth practising on the Times Tables page.
