Name: \_\_\_\_\_

Date: \_\_\_\_\_

## Section A — Percentage increase & decrease

**A1.** A café increases the price of a coffee, originally £2.80, by 15%. Find the new price.

[2 marks]

**A2.** A shop reduces a £64 jumper by 30% in a sale. Find the sale price.

[2 marks]

**A3.** Ben's savings balance of £540 grows by 4% in a year. Find the new balance.

[2 marks]

**A4.** A car valued at £9,000 depreciates (reduces in value) by 18% in its first year. Find its new value.

[2 marks]

## Section B — Reverse percentages

**B1.** After a price rise of 8%, a bike costs £270. Find the price before the increase.

[2 marks]

**B2.** A sale cuts prices by 25%. A jacket now costs £45. What was its original price?

[2 marks]

## Section C — Simple & compound interest

**C1.** £250 is invested at 6% simple interest per year. Calculate the total interest earned after 4 years.

[3 marks]

**C2.** £350 is invested at 5% compound interest per year for 2 years. Calculate the total amount in the account, to the nearest penny.

[3 marks]

## Section D — Spot the operation (no calculation)

D1. For each statement, write whether you would use an **increase multiplier**, a **decrease multiplier**, or a **reverse percentage** calculation:

(a) "A salary *increases* by 3%"

(b) "After a 20% discount, trainers cost £56 — find the original price"

(c) "Rent *reduces* by 5% for one year"
