

# Fractions, Decimals & Percentages: Weak Spots

Answer key · 14 marks total

---

## Section A — Converting fractions and decimals

1.  $5 \div 8 = 0.625$  (1)
2.  $7 \div 25 = 0.28$  (1)
3.  $0.65 = 65/100 = 13/20$  (1)
4.  $0.8 = 8/10 = 4/5$  (1)

## Section B — Fraction of an amount

5.  $96 \div 8 = 12$  (1)    $12 \times 3 = 36$  (1)
6.  $150 \div 10 = 15$  (1)    $15 \times 7 = 105$  (1)

## Section C — Percentage of an amount (no calculator)

7.  $10\% = £7$  (1)    $30\% = 7 \times 3 = £21$  (1)
8.  $10\% = £4.80$ ,  $5\% = £2.40$  (1)    $15\% = 4.80 + 2.40 = £7.20$  (1)

## Section D — Comparing fractions and percentages

9.  $3/5 = 60\%$  (1)    **$3/5$  is bigger** than  $55\%$
10.  $9/20 = 45\%$  (1)    **$47\%$  is bigger** than  $9/20$

*Marking note: award method marks for finding 10% (and 1% or 5%) first, even if the final answer contains an arithmetic slip. For comparison questions, accept working the other way (converting the percentage to a fraction) provided the comparison is correct.*
