

Practice Test 1: Answers

Dividing Large Numbers - total 31 marks

Section A

- A1 Divisor = **22** (1 mark). Quotient = **252** (1 mark). 2 marks
- A2 About **250**: $5,000 \div 20 = 250$. Accept any sensible rounding (actual answer is about 254). 1 mark

Section B (1 mark each)

- B1 $3,465 \div 5 = \mathbf{693}$ 1 mark
- B2 $6,104 \div 8 = \mathbf{763}$ 1 mark
- B3 $2,793 \div 7 = \mathbf{399}$ 1 mark
- B4 $5,976 \div 9 = \mathbf{664}$ 1 mark

Section C (1 mark for a correct method, 1 for the answer)

- C1 $7,452 \div 18 = \mathbf{414}$. Check: $414 \times 18 = 7,452$ 2 marks
- C2 $9,821 \div 23 = \mathbf{427}$. Check: $427 \times 23 = 9,821$ 2 marks
- C3 $6,435 \div 15 = \mathbf{429}$. Check: $429 \times 15 = 6,435$ 2 marks
- C4 $8,364 \div 41 = \mathbf{204}$ (the 0 must be there!). Check: $204 \times 41 = 8,364$ 2 marks

Section D (1 mark for each correct step)

- D1 $3,360 \div 3 = 1,120$, then $1,120 \div 5 = \mathbf{224}$ 2 marks
- D2 $5,184 \div 4 = 1,296$, then $1,296 \div 6 = \mathbf{216}$ 2 marks

Section E (1 mark for the whole number, 1 for the remainder part)

- E1 $4,975 \div 32 = \mathbf{155 \text{ r } 15}$. Check: $155 \times 32 + 15 = 4,975$ 2 marks
- E2 $2,350 \div 12 = 195 \text{ r } 10 = 195 \frac{10}{12} = \mathbf{195 \frac{5}{6}}$ 2 marks
- E3 $3,021 \div 25 = 120 \text{ r } 21$. $21 \div 25 = 0.84$ so the answer is **120.84** 2 marks

Section F (1 mark for the division, 1 for using the remainder correctly)

- F1 $1,138 \div 48 = 23 \text{ r } 34$. The 34 left over still need a place, so round **up**: **24 coaches**. 2 marks
- F2 $2,350 \div 24 = 97 \text{ r } 22$. The 22 left over is not enough for another one, so round **down**: **97 full packets**. 2 marks
- F3 $3,960 \div 18 = \mathbf{£220}$ (no remainder). 2 marks

Marking tip: if the method is right but there is one small slip (e.g. a times-table fact), give the method mark. Look at any wrong answers together: was it a missing 0, a remainder bigger than the divisor, or a digit in the wrong column?
