

Practice Test 2: Answers

Dividing Large Numbers - total 31 marks

Section A

- A1 Divisor = **24** (1 mark). Quotient = **289** (1 mark). 2 marks
- A2 About **200**: $8,000 \div 40 = 200$. Accept any sensible rounding (actual answer is about 193). 1 mark

Section B (1 mark each)

- B1 $2,916 \div 4 = \mathbf{729}$ 1 mark
- B2 $4,557 \div 7 = \mathbf{651}$ 1 mark
- B3 $8,253 \div 9 = \mathbf{917}$ 1 mark
- B4 $3,618 \div 6 = \mathbf{603}$ 1 mark

Section C (1 mark for a correct method, 1 for the answer)

- C1 $5,712 \div 16 = \mathbf{357}$. Check: $357 \times 16 = 5,712$ 2 marks
- C2 $8,526 \div 29 = \mathbf{294}$. Check: $294 \times 29 = 8,526$ 2 marks
- C3 $7,830 \div 27 = \mathbf{290}$ (the 0 must be there!). Check: $290 \times 27 = 7,830$ 2 marks
- C4 $9,632 \div 43 = \mathbf{224}$. Check: $224 \times 43 = 9,632$ 2 marks

Section D (1 mark for each correct step)

- D1 $4,320 \div 2 = 2,160$, then $2,160 \div 9 = \mathbf{240}$ 2 marks
- D2 $6,272 \div 4 = 1,568$, then $1,568 \div 7 = \mathbf{224}$ 2 marks

Section E (1 mark for the whole number, 1 for the remainder part)

- E1 $5,483 \div 27 = \mathbf{203 \text{ r } 2}$. Check: $203 \times 27 + 2 = 5,483$ 2 marks
- E2 $3,290 \div 15 = 219 \text{ r } 5 = 219 \frac{5}{15} = \mathbf{219 \frac{1}{3}}$ 2 marks
- E3 $4,374 \div 40 = 109 \text{ r } 14$. $14 \div 40 = 0.35$ so the answer is **109.35** 2 marks

Section F (1 mark for the division, 1 for using the remainder correctly)

- F1 $2,450 \div 16 = 153 \text{ r } 2$. The 2 left over still need a place, so round **up**: **154 minibuses**. 2 marks
- F2 $1,000 \div 35 = 28 \text{ r } 20$. The 20 left over is not enough for another one, so round **down**: **28 pieces**. 2 marks
- F3 $4,368 \div 24 = \mathbf{182 \text{ crates}}$ (no remainder). 2 marks

Marking tip: if the method is right but there is one small slip (e.g. a times-table fact), give the method mark. Look at any wrong answers together: was it a missing 0, a remainder bigger than the divisor, or a digit in the wrong column?
