

Practice Test 3: Answers

Dividing Large Numbers - total 31 marks

Section A

- A1** Divisor = **31** (1 mark). Quotient = **228** (1 mark). 2 marks
- A2** About **200**: $6,000 \div 30 = 200$. Accept any sensible rounding (actual answer is about 184). 1 mark

Section B (1 mark each)

- B1** $4,872 \div 6 = \mathbf{812}$ 1 mark
- B2** $7,236 \div 9 = \mathbf{804}$ 1 mark
- B3** $1,995 \div 5 = \mathbf{399}$ 1 mark
- B4** $6,328 \div 8 = \mathbf{791}$ 1 mark

Section C (1 mark for a correct method, 1 for the answer)

- C1** $9,078 \div 34 = \mathbf{267}$. Check: $267 \times 34 = 9,078$ 2 marks
- C2** $4,896 \div 17 = \mathbf{288}$. Check: $288 \times 17 = 4,896$ 2 marks
- C3** $7,511 \div 37 = \mathbf{203}$ (the 0 must be there!). Check: $203 \times 37 = 7,511$ 2 marks
- C4** $6,624 \div 48 = \mathbf{138}$. Check: $138 \times 48 = 6,624$ 2 marks

Section D (1 mark for each correct step)

- D1** $2,940 \div 5 = 588$, then $588 \div 7 = \mathbf{84}$ 2 marks
- D2** $7,056 \div 4 = 1,764$, then $1,764 \div 9 = \mathbf{196}$ 2 marks

Section E (1 mark for the whole number, 1 for the remainder part)

- E1** $6,215 \div 19 = \mathbf{327 \text{ r } 2}$. Check: $327 \times 19 + 2 = 6,215$ 2 marks
- E2** $4,100 \div 18 = 227 \text{ r } 14 = 227 \frac{14}{18} = \mathbf{227 \frac{7}{9}}$ 2 marks
- E3** $5,358 \div 20 = 267 \text{ r } 18$. $18 \div 20 = 0.9$ so the answer is **267.9** 2 marks

Section F (1 mark for the division, 1 for using the remainder correctly)

- F1** $3,100 \div 45 = 68 \text{ r } 40$. The 40 left over still need a place, so round **up**: **69 rows**. 2 marks
- F2** $1,000 \div 14 = 71 \text{ r } 6$. The 6 left over is not enough for another one, so round **down**: **71 tickets**. 2 marks
- F3** $2,592 \div 18 = \mathbf{144 \text{ km}}$ (no remainder). 2 marks

Marking tip: if the method is right but there is one small slip (e.g. a times-table fact), give the method mark. Look at any wrong answers together: was it a missing 0, a remainder bigger than the divisor, or a digit in the wrong column?
